

The aluminium tube: a statement of quality

Aluminium is the optimum material for convenience packaging! The excellent properties of this light, versatile metal have made it indispensable in virtually all high-technology sectors. In packaging the use of aluminium is a statement for the quality of its content. That applies especially for aluminium tubes because it is the only packaging combining a range of unique characteristics: protection without using preservatives, flexibility without sacrificing conservation and barrier functions, stylish design and a basic material with its distinctive feel. The aluminium tube makes it real.

The aerospace industry, automobile manufacturing, engine building industry... almost every sophisticated engineering industry benefits from the premium characteristics of this lightweight metal. Consumers have learned to regard the use of aluminium packaging as a mark of high product quality.

Similarly, the aluminium tube delivers outstanding performance, fulfilling a multitude of demands in an ideal manner. As a multi-talent, the aluminium tube has become an assurance of premium quality in the packaging scene. It is unbreakable, clean, light, handy and at the same time offers optical effects for maximum shelf appeal thanks to its unique, significant and differentiating feel.
